Agile Sprint Plan for Smart Sorting

1. Epic 1: Data Preparation and Preprocessing

Sprint 1 – Duration: **5 Days**

Goal: Prepare and preprocess the fruit & vegetable image dataset for training.

Given Table:

Sprint 1 Total Story Points: 8

Task	Story Point
Collect Fruit & Vegetable Dataset (Kaggle)	2
Load Data into Environment (Google Colab / Jupyter)	1
Handle Missing Values (check & clean dataset if needed)	3
Encode Categorical Labels (One-Hot Encoding / Label Encoding)	2

2. Epic 2: Model Training and Web Deployment

Sprint 2 – Duration: **5 Days**

Goal: Build and test the classification model, and deploy using Flask.

Given Table:

Sprint 2 Total Story Points: 16

Task	Story Point
Build VGG16 Transfer Learning Model	5
Evaluate/Validate Model (Accuracy, Loss, Confusion Matrix)	3
Design HTML Pages (index.html, result.html, feedback.html)	3
Deploy Flask Backend with Model Integration	5

3. Sprint Summary

Sprint	Total Story Points
Sprint 1	8
Sprint 2	16

4. Total Story Points Across Sprints: 8 + 16 = 24

5. Velocity Calculation

Velocity = Total Story Points / No. of Sprints = 24 / 2 = 12 (Story Points per Sprint)

Team Velocity: 12 Story Points/Sprint
